

ANALYSIS SEMINAR

TWO-SCALE CONVERGENCE AND APPLICATIONS IN HOMOGENIZATION PART II

Aida Timofte

DEPARTMENT OF MATHEMATICS, UNIVERSITY OF MISSISSIPPI

THURSDAY, NOVEMBER 5, 9:30 AM IN HUME 331

Abstract : The two-scale convergence is a very efficient homogenization method for partial differential equations with periodically oscillating coefficients. We introduce the notions of weak/strong two-scale convergence, periodic unfolding/folding operators, and discuss some related results. We also point out their applications in the homogenization of evolutionary variational inequalities and in the homogenization of a ferroelectric material model.
